SUMMARY

Cybersecurity analyst, CompTIA Security+ certified, working in security monitoring, alert investigation, and incident response across cloud and network environments, plus identity and access management and Azure and AWS security reviews on an enterprise security team. Hands-on lab depth in SIEM (Splunk, ELK), IDS (Snort, OSSEC), packet and log analysis, digital forensics, and malware analysis, with prior experience building a startup security program around NIST CSF 2.0.

EDUCATION

B.S. Cybersecurity Analytics and Operations – Summa Cum Laude — August 2023 – May 2026
Pennsylvania State University, Abington

WORK EXPERIENCE

Cyber Security Analyst — October 2026 – Present
TurnPoint Services – Louisville, KY (Remote)

- Monitor and investigate security alerts across corporate cloud and network infrastructure, reviewing firewall and network security logs to triage suspicious activity for a multi-brand home-services company.
- Support incident response activities, investigations, and reporting, and communicate security risks and recommendations clearly to both technical and non-technical stakeholders.
- Administer and strengthen identity and access management across corporate systems, configuring and supporting SSO, access reviews, and user lifecycle management, and support security configuration reviews of Azure and AWS environments.
- Support NIST CSF 2.0 alignment, regulatory compliance activities, and company audits, and maintain security documentation, policies, procedures, and SOPs.
- Assess vendor and third-party security risk, review security questionnaires and contract security terms, and contribute to security awareness for a primarily field-based, non-desk workforce.

Cybersecurity Specialist — August 2024 – October 2026
Stemuli – Dallas, TX (Remote)

- Led a company-wide security program build-out: ran a NIST CSF 2.0 gap assessment across all six functions, prioritized findings in authentication, client-side data handling, and input validation into an engineering remediation queue, and built the policy and controls roadmap.
- Owned COPPA/FERPA and AI governance for a K-12 platform, translating regulatory change into engineering acceptance criteria for PII blocking, age gating, and parental consent, and defining data-handling requirements for third-party AI vendors.
- Conducted recurring security control and tool reviews across the company's cloud and SaaS platforms, delivering hardening recommendations (encryption, IAM least privilege, MFA, access reviews, logging), and analyzed inbound vendor and school-district security questionnaires.

Cybersecurity and Technology Intern — September 2023 – August 2024
Stemuli – Dallas, TX (Remote)

- Conducted security reviews of AWS RDS, GCP, Azure, and SaaS platforms, assessing encryption at rest and in transit, IAM configuration, and compliance posture; compiled results into a reusable internal review library.
- Built team-specific security onboarding handbooks and a multi-domain employee training handbook, and proposed data governance procedures aligned with CIS, NIST, COPPA, and FERPA under Zero Trust.

SKILLS AND CERTIFICATIONS

- **Security Operations:** SIEM & Log Analysis, Firewall & Network Log Review, IDS/IPS, Alert Triage, Incident Response, Digital Forensics, Malware Analysis, Packet Analysis, Vulnerability Assessment, Network Security, Cloud Security, IAM & SSO, Zero Trust, AI-Assisted Analysis
- **Tools:** Microsoft Azure, AWS, Splunk, Elastic Stack (ELK), Snort, OSSEC, Wireshark, tcpdump, Nmap, Metasploit, OWASP ZAP, Volatility, Autopsy, FTK Imager, PeStudio, ProcMon, Active Directory, Linux, Git, Zapier, Power Automate
- **Governance & Compliance:** GRC, NIST CSF 2.0 / RMF, ISO 27000, CIS Controls, MITRE ATT&CK, COBIT 2019, Privacy Compliance (COPPA/FERPA), AI Governance, Vendor Risk, Risk Assessment, Security Control Assessments
- **Languages & Certifications:** Python, Bash, PowerShell, SQL, Java, JavaScript | CompTIA Security+; Microsoft SC-900, AZ-900, DP-900

PROJECTS

Capstone Forensic Ransomware Investigation

- Analyzed 12.7M+ packets, 7 memory captures, 6 disk images, and 90,000+ log entries to reconstruct a four-day attack chain from phishing-based initial access through lateral movement to suspected exfiltration.

Forensic Analysis Labs (Network, Memory, Image & Log)

- Identified a malicious process masquerading as a legitimate binary in a 6.4 GB memory image (Volatility), reconstructed an anti-forensic timeline from a disk image (Autopsy, FTK Imager), and wrote a Python parser for 78,000+ Windows Security Log events surfacing off-hours logons and audit-log clearing.

Security Operations & Detection Labs

- Deployed Splunk (indexer, forwarders, SPL queries) and an Elasticsearch, Logstash, and Kibana pipeline with dashboards to identify an SSH attacker; configured Snort network IDS with custom rules, OSSEC host IDS with file-integrity monitoring, and VyOS and pfSense firewalls.
